

## POSTOPERATIVE INSTRUCTIONS REVERSE TOTAL SHOULDER REPLACEMENT

### ❖ SLING/MOVEMENT

- For the first 7 days after your surgery, you must wear your sling at all times including while you are asleep. You may only remove the sling to shower and to perform range of motion exercises for your elbow. You should flex and extend your elbow 3 to 4 times a day to prevent stiffness.

### ❖ ICE

- An ice machine will be provided to you prior to your surgery. This will help decrease swelling and pain after your surgery. Use the ice machine as much as possible when you get home at intervals of 30 minutes on and off. You should keep the ice machine for approximately two weeks. Do not use the ice machine while you are sleeping.

### ❖ MEDICATIONS

- Once you are home from the hospital, you can take 600 mg of Ibuprofen (Advil/Motrin) every 6 hours to help with inflammation and pain. This medication will help cut down the use of narcotic-based pain medication. However, if you still have pain after taking the Ibuprofen, continue taking the pain medication every 4-6 hours as needed.
- A **sleeping medication** (e.g. Ambien) is also provided to help you sleep at night. Take one tablet 30 minutes before you plan to sleep.

### ❖ DRESSING/BANDAGES

- Your shoulder dressing is waterproof. You may shower the next day after surgery. Do not remove the dressing; we will do this for you at your 1<sup>st</sup> post operative visit in the office.
- Do not take a bath or submerge your shoulder in water until your incisions are checked at your first post-op visit.

### ❖ DRIVING

- You may drive 1 week after surgery if you are not taking pain medication. If your right arm is the operative side, then you must have good control of your arm prior to driving.

### ❖ APPOINTMENT

- Please call the office prior to, or immediately following, your surgery in order to schedule a postoperative appointment. This should be scheduled 7-10 days after surgery. At that visit you will be given a prescription to begin physical therapy.
